Question:

Do uncircumcised men make better lovers?

Answer:

Do uncircumcised men make better lovers? Fascinating question.

No, it really isn't about circumcised or uncircumcised. Part of it is just the way the penis is created.

The skin of the penis is loose so that as it's rubbed with intercourse or manually, it just creates arousal in neat ways. And having the foreskin on or having it off doesn't necessarily make the head of the penis more sensitive or less sensitive.

It's kind of an interesting question, because men are always wanting to be great lovers, and they are thinking, "Which one would be better?" So, it's good to remember, guys, it doesn't make a difference. The head of your penis is very sensitive, regardless, and it really is about the enjoyment.

Wives, I would say the same thing, that a part of this is that I don't think even in the vagina you would notice a difference. Your husband is enjoying you.

So, I would just say with this one, relax. It doesn't make a difference. Enjoy each other. It's so much more than the parts.
